

# THE ALL-NEW NIGHTFORCE 2.5-10 x 32 NXS COMPACT. SMALL PACKAGE, BIG PERFORMANCE.

Available with Nightforce ZeroStop technology that allows an absolute return to your chosen zero point, regardless of how much you have adjusted elevation settings.

Our Compact NXS series with 24mm objective lenses has proven that a scope needn't be massive to provide exceptional performance. In fact, our customers tell us they find the clarity, resolution and image quality superior to competitors' scopes having much larger objective lenses.

So, you can imagine the performance you'll enjoy with our new 2.5-10 x 32. Even more low-light capability, yet in a compact, lightweight, streamlined instrument that complements a hunting rifle.

Our Compact NXS scopes were originally created for U.S. Special Forces for use with night vision devices. At just 12 inches in length and 19 ounces, the 2.5-10 x 32 NXS

represents the optimum ratio of size-to-weight performance.

Like crafting a fine watch, building a small riflescope that outperforms most larger, bulkier scopes demands a commitment to tolerances, materials, and innovative optical design few scope companies have the resources—or the desire—to make.

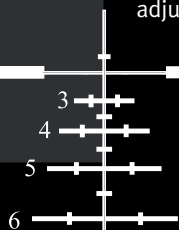

Size is never a substitute for quality.

## WITH THE FASTEST HUNTING RETICLES EVER CREATED.

A family of three revolutionary new ballistic reticles, designed specifically for the hunter, is now available with our 2.5-10 x 32 and 2.5-10 x 24 scopes. Elevation lines are marked in 100-yard intervals to 600 yards (as well as 50-yard increments between 300 and 600 yards). Windage compensation is marked in 5 and 10 mph increments.

Each reticle is tailored to low-, medium- or high-velocity cartridges, providing a precise, accurate bullet drop reference for virtually any hunting caliber. Simple and highly effective, our new "smart" reticle system is up to twice as fast as traditional rangefinding reticles. Determine your zero, and there is no need for a drop chart, turret adjustments or other complicated calculations.
